

📁 The FinWise scenario

You are a PM at FinWise Co., a SaaS company providing financial-management software to small businesses. FinWise recently reached product-market fit and wants to focus heavily on growth and distribution over the next year. They use a product-led growth approach with a reverse-trial experience, aiming to make the product compelling enough to convert users into paid customers. Currently: Only 2% of customers who begin a trial convert to paying customers

Annual Recurring Revenue is \$10M

One-year retention for paid customers is 40%, meaning 60% churn within a year

Most of the marketing budget goes to paid acquisition to drive trial sign-ups

Adding more money to acquisition is no longer driving meaningful growth

Read the scenario

Familiarize yourself with FinWise's current situation above.

State your hypothesis

Write a single clear statement: "I think FinWise's biggest problem is..."

Gather your evidence

List two or three observations from the scenario that back up your hunch.

Make your bet

Given your hypothesis, what is the one thing you would test first, and why?

What a good hypothesis looks like: a strong hypothesis is one you can defend, not one that turns out correct. Use this format:

Hypothesis format

IF [we do X change]:

IF we show new users a 3-step onboarding checklist on their first login

THEN [Y metric] WILL [increase/decrease] BY [Z amount]:

THEN wk-1 activation WILL increase BY 10 to 15%

BECAUSE [underlying assumption]:

BECAUSE most users drop off from not knowing where to start

WHICH WE'LL MEASURE WITH [method + timeframe]:

An A/B test over 2 weeks, core-action completion as the primary

metric, day-1 drop-off rate as the guardrail.

provide all three outputs (hypothesis, evidence, bet)

Hypothesis

I think FinWise's biggest problem is a broken onboarding and activation experience within the reverse-trial flow, causing users to drop off before reaching their "aha moment" and discovering core product value.

- **IF [we do X change]:** We introduce an interactive, 3-step setup checklist on first login that guides users to connect a bank account and generate their first automated financial summary within 10 minutes.
- **THEN [Y metric] WILL [increase/decrease] BY [Z amount]:** THEN Day-7 Core Activation Rate WILL increase BY 25% (from ~15% to ~40%), lifting overall trial-to-paid conversion from

2% to 3.5%.

- **BECAUSE [underlying assumption]:** Reverse trials give users full access, but without structured setup guidance, small business owners experience feature overload, fail to see actionable financial insights, and abandon the trial.
- **WHICH WE'LL MEASURE WITH [method + timeframe]:** An A/B test run over 4 weeks targeting all new trial sign-ups, measuring Day-1 Core Action completion as the leading indicator and 14-day Trial Conversion Rate as the primary outcome metric.

Evidence

- **Severe Funnel Leakage (2% Conversion):** Converting only 2% of trial users into paying customers indicates a massive gap between initial user intent and value realization during the reverse-trial period.
- **Low One-Year Retention (40% Retention / 60% Churn):** High first-year churn signals that even users who convert were likely insufficiently onboarded into habits that drive long-term retention.
- **Paid Acquisition Bottleneck:** Paid ad spend has hit diminishing returns. Top-of-funnel volume is sufficient, but compounding growth is blocked by monetizing and retaining the traffic already coming through the door.

My Bet

First Test: A guided, outcome-focused onboarding wizard targeting primary financial setup tasks (bank integration & balance sheet view).

Why:

Fixing activation at the top of the product funnel yields the highest ROI. Improving the trial-to-paid conversion rate doubles the throughput of FinWise's existing paid marketing spend without requiring additional ad budget. Furthermore, users who build setup momentum on Day 1 are far more likely to integrate FinWise into daily financial routines, directly mitigating the 60% annual churn rate.

I'm going to share a dataset from a SaaS company called FinWise Co. They provide financial management software to small businesses and use a

Conversion Funnel Dashboard

Summary KPIs (13-Month Aggregate: Oct 2023 – Oct 2024)

Metric	Aggregate Value	Monthly Average
Website Visits	94,558	7,273.69
Trials Started	6,424	494.15
Paid Conversions	128	9.85
Visit-to-Trial Conversion Rate	6.79%	7.00%
Trial-to-Paid Conversion Rate	1.99%	1.99%
Overall Visit-to-Paid Conversion Rate	0.14%	0.14%

...

Performance Extremes:

- Best Performing Month (Trial-to-Paid %): September 2024 at 2.08% (12 paid / 576 trials)
- Worst Performing Month (Trial-to-Paid %): June 2024 at 1.87% (6 paid / 321 trials)
- Best Performing Month (Visit-to-Trial %): July 2024 at 11.21% (613 trials / 5,466 visits)
- Worst Performing Month (Visit-to-Trial %): June 2024 at 3.41% (321 trials / 9,426 visits)

Significant Patterns & Anomalies

1. **Extreme Flatness of the Trial-to-Paid Conversion Rate:** Across all 13 months, the conversion rate from trial to paid customer remains restricted within a narrow range between 1.87% and 2.08% (averaging 1.99%). Paid conversions scale strictly linearly with trial volume ($R = 0.99$).
2. **Inverse Relationship Between Website Traffic Volume and Trial Conversion Rate:** High website traffic months do not yield higher trial conversion rates. June 2024 recorded peak traffic (9,426 visits) alongside the lowest Visit-to-Trial conversion rate (3.41%), whereas July 2024 recorded lower traffic (5,466 visits) alongside the highest Visit-to-Trial conversion rate (11.21%).
3. **High Volatility in Product Usage vs. Unchanged Conversion Rates:** Feature adoption and engagement fluctuate significantly across months (Import Data ranges from 23.06% to 94.42%; Modeling ranges from 5.39% to 63.60%; Average Session Duration ranges from 0.48 min to 11.75 min), yet the Trial-to-Paid conversion rate shows no corresponding variation.

Single Biggest Drop-Off Point

- **By Percentage:** The single largest drop-off occurs at the Trial-to-Paid Conversion stage, where 98.01% of trial users drop out (a 1.99% pass-through rate).
- **By Absolute Volume:** The single largest drop-off occurs at the Website Visit-to-Trial stage, where 88,134 out of 94,558 total visitors drop out before initiating a trial (a 93.21% volume reduction).

Review the output
Read the three patterns the LLM identified. Note which surprises you most and why. Where does it say the biggest drop-off occurs? Map it to a Product Funnel stage:

Show code <>

1. Reviewing the Data Analysis

- **Most Surprising Pattern: Pattern #3 (High Volatility in Product Engagement vs. Unchanged Conversion Rates).** It is unexpected that massive swings in feature adoption—such as Data Import jumping from 23% to 94% or Modeling adoption jumping from 5% to 63%—have zero measurable impact on the trial-to-paid conversion rate (stuck between 1.87% and 2.08%).
- **Biggest Drop-Off Stage Mapping:**
 - **Relative Drop-Off (98.01% Loss):** Maps to the **Activation to Revenue** funnel boundary (Monetization stage).
 - **Absolute Drop-Off (88,134 Lost Users):** Maps to the **Acquisition** stage (Website Visit to Trial conversion).

2. Pressure-Testing the Initial Hypothesis

- **Verdict:** The data **challenges** the original Exercise 1 hunch.
- **Analysis:** The initial hypothesis assumed that low trial-to-paid conversion was caused by users failing to activate or set up core features. However, in **October 2024**, **94.42%** of trial users imported data and **63.60%** engaged in financial modeling, yet the paid conversion rate remained glued at **2.04%**.
- **Refined Thinking:** High product engagement during the reverse trial is already occurring, but it is not translating into monetizable value. The bottleneck is not onboarding usability—it is the reverse-trial feature gating and value paywall structure, which allows users to extract utility for free without encountering a compelling trigger to convert to a paid subscription.

3. The Growth Loop Bet

- **Chosen Loop: Collaboration Growth Loop**
- **Reasoning:** Small business financial management requires active coordination with external stakeholders (accountants, bookkeepers, fractional CFOs, and co-founders). Triggering multi-seat collaboration during the trial embeds FinWise directly into operational workflows, driving high-intent viral acquisition of new clients through external accounting partners.

4. Visualizing the Loop

- **Step 1 (New Signup):** A small business owner starts a reverse-trial to manage company finances.
- **Step 2 (Invite Collaborator):** To complete financial reports or audits, the owner invites an external accountant or bookkeeper into the workspace.
- **Step 3 (Joint Value Realization):** Both parties collaborate around automated reporting, balance sheet reconciliations, and shared workflows.
- **Step 4 (Paywall & Expansion):** Shared operational dependencies require ongoing multi-user access, triggering account upgrade upon trial expiration and introducing the invited accountant to FinWise for their other business clients.

ased on what you know about FinWise Co. and their product-led growth model,

visualize a [your chosen loop type] growth loop for them

Product Experimentation • Custom Gem

Here is a visualization of a **Collaboration-Driven** growth loop for FinWise Co.

Small business financial management is rarely a solo activity. By focusing on the interplay between the business owner and their essential external partners (Accountants/Bookkeepers), FinWise can create a sustainable, high-retention acquisition loop.

Formalize your hypothesis

Based on the data, I believe FinWise's biggest growth problem is [X] because [Y], and the highest-leverage experiment I would run first is [Z].

Product Experimentation • Custom Gem

Based on the data, I believe FinWise's biggest growth problem is a weak trial value paywall and monetization model (Revenue stage)

because trial users are already achieving high product engagement during the reverse trial—with data import rates reaching up to 94% and financial modeling reaching 63%—yet trial-to-paid conversion remains stuck flat at ~2% regardless of engagement intensity,

and the highest-leverage experiment I would run first is a Collaboration-Driven Growth Experiment that gates multi-seat stakeholder features (such as accountant and bookkeeper shared reporting) behind paid subscription tiers while offering free collaborator seats during the trial to build multi-user operational lock-in.

The goal: a working prompt that builds a prototype of three to five screens that move a user from sign-up to the moment they experience FinWise's core value. I'm a PM at FinWise Co., a SaaS product giving small businesses financial-

Product Experimentation • Custom Gem

1. FinWise's "Aha Moment"

- **The Core Value:** FinWise's "Aha moment" is seeing an automated, unified cash flow dashboard with a 90-day forward forecast and immediate action items.
- **Why:** Small business owners struggle most with real-time cash visibility and future solvency. Once a user sees their live bank data automatically categorized into a clear cash runway forecast without manually building a spreadsheet, the core value proposition of FinWise clicks immediately.

2. Minimum Onboarding Screens (3-Screen Flow)

To get users from sign-up to value in under two minutes, the onboarding flow is kept to 3 lean screens:

- **Screen 1:** Business Setup & Role Calibration (*Personalization*)
- **Screen 2:** Instant Financial Data Connection (*Core Integration*)
- **Screen 3:** The Cash Runway Dashboard (*The Aha Moment*)

3. Screen Breakdown: Jobs & Single Actions

- **Screen 1: Business Profile & Goal Selection**
 - **Single Job:** Calibrate the dashboard template to the user's specific business type and primary pain point.
 - **Single Required Action:** Select business entity type (e.g., Agency, Retail, SaaS) and primary goal (e.g., "Fix Cash Flow," "Track Overhead," or "Prepare for Tax").
 - **What Was Removed:** Company logo upload, team invite fields, full address/tax ID forms, and secondary accounting preference settings.
- **Screen 2: Secure Bank & Software Integration**
 - **Single Job:** Connect primary financial data sources to populate real-time transactions and balances.
 - **Single Required Action:** Authenticate primary business bank account (via Plaid) or sync existing accounting software (e.g., QuickBooks/Xero).
 - **What Was Removed:** Manual spreadsheet uploading, historical balance sheet adjustments, and multi-account linking (optional post-onboarding).
- **Screen 3: Cash Runway & Insight Dashboard (Aha Moment)**
 - **Single Job:** Deliver immediate visual clarity on 90-day cash projections and highlight top cost-saving or revenue-risk insights.
 - **Single Required Action:** Click "Lock In Forecast" or "Invite Accountant/Collaborator" to accept the baseline setup.
 - **What Was Removed:** Complex scenario-builder tools, deep transactional edit tables, and payroll banners.

4. Where Personalization & Pre-Filled Data Shorten the Path

- **Screen 1 (Personalization Quiz):** Selecting the business model automatically configures the metric cards on Screen 3 (e.g., highlighting recurring revenue for SaaS vs. inventory costs for Retail) so the user sees a tailor-made interface on first view.
- **Screen 2 (Pre-Filled Bank Data):** Using automated Plaid/API syncing instantly ingests 90 days of transaction history, eliminating manual data entry and populating the forecast model in under 10 seconds.
- **Screen 3 (Smart Auto-Categorization):** Machine learning auto-classifies top expense categories on load, showing an immediate breakdown without requiring the user to map chart-of-accounts line by line.

Plan your flow in an LLM

Think through what screens you need, what FinWise's Aha moment is, and what the flow needs to accomplish, before writing a single line of prompt.

1. Refined System Prompt for Prototype Generation

Goal: Guide new reverse-trial users from signup to their core "Aha moment" in under 2 minu

Technical Stack & Aesthetics:

- Framework: React with Tailwind CSS (or clean HTML/Tailwind)
- Styling: Modern, clean, trustworthy fintech UI (Slate/Navy primary, Emerald green accent
- Interactive Components: Smooth step transitions, live progress indicator (Step 1 of 3),

Screen 1: Business Profile & Focus (Personalization)

- Job: Calibrate the platform to the user's business type and immediate pain point.
- Header: "Welcome to FinWise. Let's tailor your cash view."
- Inputs:
 - 1. Business Model selector (Agency / Professional Services, Retail / E-commerce, SaaS /
 - 2. Primary Goal radio group ("Fix cash flow bottlenecks", "Forecast 90-day runway", "Pre
- Action: Primary CTA button "Continue to Data Integration →".

Screen 2: Instant Data Connection (Core Integration)

- Job: Connect real financial data instantly without manual entry.
- Header: "Connect your financial source to generate your forecast."
- UI Elements:
 - One-click Plaid integration card ("Connect Primary Business Bank").
 - Alternative card: "Import QuickBooks / Xero Data".
 - Security reassurance badge ("256-bit Bank-Grade Encryption | Read-Only Access").
- Simulated Interaction: Clicking "Connect Primary Business Bank" shows a 2-second loading

Screen 3: Interactive Cash Runway Dashboard (The Aha Moment)

- Job: Deliver immediate visual clarity on 90-day cash projections and highlight actionabl
- UI Layout:
 - Top Metric Cards: "Current Cash Balance (\$48,250)", "Projected 90-Day Runway (14 Weeks
 - Center Chart: Visual line chart / bar graphic showing historical 30-day cash vs. proje
 - Smart Insight Cards (3 Highlighted items):
 - 1. "⚠️ Alert: \$4,200 recurring SaaS subscriptions detected with low utilization."
 - 2. "💡 Opportunity: Invoice #1042 (\$8,500) is 12 days overdue."
 - 3. "✅ Runway Safe: Payroll covered through Q4."
- Key Action CTA: "Lock In Forecast & Invite Accountant" (Primary) and "Explore Full Works

2. Design Choices & Aha Moment Breakdown

- **The Aha Moment:** The Aha moment occurs on **Screen 3 (Interactive Cash Runway Dashboard)**. Within 60 seconds of signing up, the small business owner transitions from uncertainty to seeing a live, 90-day cash flow projection paired with automated, actionable financial alerts (e.g., overdue invoices and wasteful subscriptions).
- **Lean 3-Screen Architecture:** Every extraneous step—such as profile picture uploads, complex tax settings, multi-team member invitations, or manual chart-of-account mapping—was removed. Setup friction is minimized by replacing manual data entry with a simulated automated bank sync on Screen 2.
- **Personalization-Driven Relevance:** Screen 1 collects business model parameters that instantly format Screen 3's metric cards and insights, ensuring the user immediately sees a customized interface relevant to their specific industry rather than a generic blank dashboard.

refine this prompt: Build a clickable onboarding prototype for FinWise Co., a financial-management SaaS for small businesses (product-led growth, reverse trial).

Act as a Principal Product Designer specializing in Product-Led Growth (PLG) for SaaS platforms. Build a fully interactive, clickable 3-screen onboarding prototype for FinWise Co., a SaaS financial management tool for small business owners operating on a reverse-trial model.

Core Goal: Guide new trial users from sign-up to their core "Aha moment"—seeing an automated, 90-day cash runway forecast with instant actionable insights—in under 2 minutes with zero friction.

Design & UI Guidelines:

- Modern, clean, trustworthy fintech aesthetic using Tailwind CSS (Slate/Naval #0F172A primary, Emerald green #10B981 accents for cash-positive states, Amber #F59E0B for alerts).
- Mobile-responsive layout centered in a modern app container with a visible step progress bar (Step X of 3).
- Use realistic FinWise sample data. Pre-fill non-essential fields to eliminate setup drag.

Required Screens & Navigation Logic:

- **Screen 1: Business Profile & Focus (Personalization)**
 - *Job:* Calibrate the platform to the user's business type and immediate financial priority.
 - *UI Elements:*
 - Header: "Welcome to FinWise. Let's tailor your cash view."
 - Business Model Selector (Interactive cards: Agency/Services, Retail/E-commerce, SaaS/Tech, Local Service). Default to "Agency / Services".
 - Primary Goal Radio Group ("Fix cash flow bottlenecks", "Forecast 90-day runway", "Prepare for tax/accounting").
 - *Action:* Primary CTA button "Continue to Data Integration →" that navigates directly to Screen 2.
- **Screen 2: Instant Data Connection (Core Integration)**
 - *Job:* Connect financial data instantly with bank-grade security reassurance.
 - *UI Elements:*
 - Header: "Connect your financial source to generate your forecast."
 - Primary Card: Interactive "Connect Primary Business Bank" (with Plaid branding).
 - Secondary Card: "Import QuickBooks / Xero Data".
 - Security Badge: "🔒 256-bit Bank-Grade Encryption | Read-Only Access".
 - *Interactive Flow:* Clicking "Connect Primary Business Bank" triggers a 2-second animated loading overlay ("Fetching 90-day transaction history... Auto-categorizing expenses..."), which automatically transitions into Screen 3 upon completion.
- **Screen 3: Interactive Cash Runway Dashboard (The Aha Moment)**
 - *Job:* Deliver instant visual clarity on cash projections and highlight top financial opportunities.
 - *UI Elements:*
 - Header: "Your Live Cash Forecast is Ready"
 - Top Metric Cards: "Current Cash Balance: \$48,250", "Projected Runway: 14 Weeks", "Net Monthly Cash Flow: +\$6,400".
 - Center Chart: Visual SVG bar/line chart illustrating 30-day historical cash vs. projected 90-day cash runway with a red minimum safety line.
 - Smart Insight Cards:
 1. "⚠️ Alert: \$4,200 in recurring SaaS subscriptions detected with low utilization."
 2. "💡 Opportunity: Invoice #1042 (\$8,500) is 12 days overdue."
 3. "✅ Runway Safe: Payroll covered through Q4."
 - *Action:* Primary CTA "Lock In Forecast & Invite Accountant" and Secondary CTA "Explore Full Workspace".

Deliver this as a single-file, fully functional, stateful React component using Tailwind CSS, allowing a reviewer to click through the entire onboarding flow seamlessly.

Name the moment
State the specific action a user takes that signals they've felt
FinWise's value, not a feature, a realization.

Product Experimentation • Custom Gem

The Aha Moment: Realization Signal

- **The Moment:** The realization occurs when the user clicks "**Connect Primary Business Bank**" on Screen 2 and lands on the live **Cash Runway Dashboard** on Screen 3, viewing their auto-generated **90-Day Projected Cash Runway (14 Weeks)** and auto-detected expense alerts.
- **The Specific Action:** The user's explicit behavioral signal is **interacting with a Smart Insight card** on Screen 3 (e.g., clicking to resolve the "**⚠️ \$4,200 low-utilization SaaS subscription alert**" or expanding the overdue invoice prompt). It shifts the user's perception from "this is an accounting ledger tool" to "this tool just found money I was actively losing."

Connecting the Realization to 1-Year Retention

- **Behavioral Predictor:** A user who interacts with an automated risk/opportunity insight on Day 1 shifts from passive data viewing to active financial management within FinWise.
- **Why It Predicts Who Stays:** Small business owners churn (60% annual churn) when software becomes a manual bookkeeping chore rather than a continuous operational co-pilot. Actioning an automated insight on Day 1 builds immediate operational reliance; users who anchor their cash flow visibility to FinWise's forward projections form a weekly checking habit, directly counteracting the 60% first-year churn rate.

Friction Removed & Underlying Hypothesis

- **Cut Step:** Completely eliminated manual Chart of Accounts mapping, historical CSV uploads, team seat configuration, and tax/accounting setting wizards prior to dashboard delivery.
- **Simplification:** Replaced multi-step accounting setup with a one-click simulated Plaid integration that automatically ingests and categorizes 90 days of transactions in 2 seconds.
- **Hypothesis:**
 - **IF** we replace manual ledger setup with automated bank-data ingestion and instant insight rendering,
 - **THEN** time-to-value (TTV) will drop from 20+ minutes to under 60 seconds,
 - **BECAUSE** small business owners abandon trials when faced with tedious manual setup before seeing any tangible benefit, whereas instant baseline visibility drives immediate activation.

write the one-paragraph rationale

Product Experimentation • Custom Gem

FinWise's growth strategy must pivot from top-of-funnel acquisition to fixing the monetization and activation mechanics within the product experience. While paid acquisition continues to bring small business owners through the door, the current reverse-trial funnel leaks 98% of users before conversion and loses 60% of paid subscribers within their first year. Injecting more budget into acquisition yields diminishing returns because the core bottleneck isn't traffic volume—it is the lack of immediate, embedded value during the trial period that fails to build long-term operational dependency. By reallocating focus toward accelerating the time-to-value during onboarding and establishing collaborative multi-seat workflows, FinWise can unlock compound growth by dramatically increasing conversion and retention on the traffic it already attracts.

what is The goal of onboarding

Product Experimentation • Custom Gem

In a product-led growth (PLG) model like FinWise's, the core goal of onboarding is **to guide the user to their "Aha moment" as fast as possible so they realize immediate, tangible value before the trial ends.**

Specifically, effective onboarding for FinWise accomplishes three main objectives:

- **Minimizes Time-to-Value (TTV):** Removes manual setup friction (like complex ledger mapping or tedious CSV uploads) so the user experiences automated financial visibility in under two minutes.
- **Establishes Operational Habituation:** Converts passive setup into active engagement by highlighting actionable insights (e.g., cash runway forecasts and expense alerts) that build daily or weekly usage habits.
- **Drives Paid Conversion & Retention:** Proves core product utility during the reverse-trial window, directly lifting the 2% trial-to-paid conversion rate and setting the foundation for long-term customer retention.

based on the onboarding goal above, write one to two sentences stating the objective

Product Experimentation • Custom Gem

The objective of FinWise's onboarding is to guide new trial users to their core "Aha moment"—realizing instant visibility into a 90-day cash runway forecast—in under two minutes with zero friction. By stripping away setup drag and instantly surfacing actionable financial insights, the onboarding flow aims to build immediate operational reliance, directly lifting trial-to-paid conversion above 2% and strengthening long-term customer retention.

overall Objective , in one or two sentences

Product Experimentation • Custom Gem

The overall objective is to maximize FinWise's revenue growth by accelerating time-to-value during onboarding and optimizing the reverse-trial paywall structure. By guiding trial users to an immediate 90-day cash runway "Aha moment" and embedding multi-seat collaborative workflows, FinWise aims to significantly lift trial-to-paid conversion above 2% and reduce the 60% annual churn without relying on additional paid acquisition spend.

User segments or personas , include characteristics, behaviors, challenges

User Segments & Personas for FinWise Co.

Segment / Persona	Characteristics	Behaviors	Challenges
The Reactive Founder <i>(Time-Strapped Small Business Owner)</i>	• Non-financial background	• Checks bank balances daily on mobile	• Needs immediate quick wins with setup overhead
	• Runs micro-businesses or early-stage agencies	• Manages cash flow reactively via basic spreadsheets	• Constantly anxious about payroll unexpected expenses
	• Low technical proficiency in finance	• High complexity aversion	• Abandons tools quickly if setup requires >5 minutes
The Operational Growth Lead <i>(Experienced In-House Lead / Operations Manager)</i>	• Mid-sized small business (10–50 employees)	• Runs weekly operational syncs	• Frustrated by fragmented financial tools
	• Moderate to high technical proficiency	• Regularly imports data and builds scenario models	• Struggles to communicate projections to leadership
	• Familiar with tools like QuickBooks, Excel, or Xero	• Evaluates tools based on depth and ROI	• Hits paywall fully validating seat collaboration
The External Advisor <i>(Accountant, Bookkeeper, or Fractional CFO)</i>	• Financial expert managing 5–20 SMB client accounts	• Logs in to reconcile statements and review client reports	• Burdened by providing messy delayed account data
	• High financial literacy	• Needs multi-tenant dashboard access	• Needs audit reports and seamless client co-pilot
	• Influences software purchasing decisions	• Shares monthly performance summaries	• Dislikes re-introducing clients into siloed platforms

...

write :User segments or personas , include characteristics, behaviors, challenges in one to two sentences

The Reactive Founder (Time-Strapped Owner): Non-financial owners with extreme complexity aversion who manage cash flow reactively, struggling with payroll anxiety and abandoning software that requires tedious manual setup.

The Operational Growth Lead (In-House Manager): Tech-savvy ops leads at growing businesses who regularly run financial scenarios, but struggle to align team reporting and validate multi-seat ROI before hitting rigid trial paywalls.

The External Advisor (Accountant / Fractional CFO): Financial experts managing multiple client accounts who demand audit-ready reports, but face friction co-piloting with clients across fragmented, siloed platforms.

User journey & key actions , stages + 1 to 2 target actions each

Product Experimentation • Custom Gem

User Journey & Key Actions

- **Acquisition Stage**
 - **Target Action 1:** Click a targeted paid ad or landing page CTA to initiate a reverse-trial account creation.
 - **Target Action 2:** Complete the baseline 1-click business profile calibration on first login.
- **Activation Stage**
 - **Target Action 1:** Connect a primary business bank account (via Plaid) or sync existing accounting software in under 60 seconds.
 - **Target Action 2:** View and interact with the auto-generated 90-day cash runway forecast and smart insight alerts (the "Aha moment").
- **Engagement Stage**
 - **Target Action 1:** Resolve or act on an automated financial insight (e.g., flagging low-utilization subscriptions or sending an overdue invoice reminder).
 - **Target Action 2:** Invite an external collaborator (such as an accountant, bookkeeper, or co-founder) to co-pilot the workspace.
- **Revenue (Monetization) Stage**
 - **Target Action 1:** Hit a multi-seat collaboration paywall or advanced forecasting limit during the reverse trial.
 - **Target Action 2:** Enter payment details to convert to a paid subscription before the trial period expires.
- **Retention Stage**
 - **Target Action 1:** Establish a recurring weekly routine of checking live cash runway projections.
 - **Target Action 2:** Generate and export monthly financial summary reports with invited stakeholders.
